

Open PhD Position at the AASS Learning Systems Lab

Pollution Monitoring with Stationary and Mobile Gas Sensors

Open PhD Position

A new PhD position is available at the AASS Learning Systems Lab, University of Örebro, Sweden. The 3-year PhD position is fully funded within the EU project DIADEM (Project Leader: [Achim J. Lilienthal](#)).

Örebro University

The University of Örebro (<http://www.oru.se>) is a young university currently enrolling more than 14000 students. It is located in Örebro, a city with 100'000 inhabitants, which is situated in central Sweden at 59°16'N 15°13'E. More information about Örebro can be found, for example, at <http://en.wikipedia.org/wiki/Örebro>.

The AASS Learning Systems Lab

The Centre for Applied Autonomous Sensor Systems (AASS Research Centre, <http://aass.oru.se>) carries out multi-disciplinary research at the intersection of robotics, machine learning, artificial intelligence, computer vision, computer science,

and measurement technology. The research and human environment at AASS is young and enthusiastic. Researchers come from different countries and have different scientific and cultural backgrounds. AASS also frequently hosts international researchers and is involved in several international projects. This means that, particularly in the DIADEM project, the enrolled PhD candidates will have the opportunity to travel and to cooperate with people in other countries.

The Learning Systems Lab is one of three research groups within AASS. Our research is recognized world-wide with its focus generally on the development of algorithms and robotic/sensor systems for real-world tasks.

Major directions are Mobile Robot Olfaction, Robotic Map Learning, Robot Vision, Autonomous Transportation Systems, Programming-by-Demonstration and Tactile Exploration.

Further information can be found at <http://www.aass.oru.se/Research/Learning>. Currently, the Learning Systems Lab has a staff of 9 PhD students, 5 post-docs, 3 part-time professors and one associate professor.

The DIADEM Project

The objective of the DIADEM project (Distributed Information Acquisition and Decision-Making for Environmental Management) is to provide methods and tools that will support environmental management, particularly in industrial settings. This will be achieved by means of developing a system that supports seamless integration of efficient gas detection and gas monitoring with advanced decision support systems. The combination of rich domain expertise and relevant context information with advanced planning systems will contribute to prevent chemical air pollution and to mitigate consequences of catastrophic chemical incidents.

The DIADEM consortium consists of 9 partners from 6 European countries (Belgium, Denmark, the Netherlands, Germany, Romania, and Sweden), including four academic partners, three companies and two environmental protection agencies.

PhD Studies

The major part of the work can be dedicated to research in the area of *pollution monitoring with stationary and mobile gas sensors*, particularly to develop (1) anomaly detection in large sets of distributed gas sensor measurements; (2) methods for distributed gas source localisation; and (3) algorithms for sensor planning so as to use the mobile sensors for gas distribution modelling in an optimal way. Apart from working towards the PhD thesis, the enrolled PhD student will be involved in the project work, which is expected to include occasional research visits of our European partners.

Prerequisites and Application Process

In addition to interest in the topic, a strong theoretical background and solid programming skills, applicants should have the equivalent of a Masters degree in an appropriate field (for example: Physics, Applied Mathematics, Robotics, Computer Science). It is not necessary to be familiar with the Swedish language but proficiency in written/spoken English is mandatory.

To apply for the position, please send a motivation letter along with an updated CV (including at least two academic references) by e-mail to Achim Lilienthal (achim.lilienthal@oru.se). Applications can be sent immediately and will be considered until the position is fixed.

We are looking forward to *your* application!

Practical Information – PhD Studies in Sweden

PhD students in Sweden are University employees and they have all the social and financial rights of other employees. Among these: a fixed monthly salary adequate to the cost of living in Sweden, inclusion in the Swedish social security system, and at least 28 days of paid vacation each year. These conditions are guaranteed for three years as long as the requirements for the PhD studies are fulfilled.

PhD students in Sweden have to take advanced courses during their study program. These are typically technical courses relevant to their research project, but may also be courses about other related disciplines, including scientific methodology and project management. Courses at AASS are meant to provide students with a unique educational background in autonomous sensor systems.

PhD candidates in Sweden must devote up to 20% of their time to institutional work. This work typically consists in helping with the undergraduate education. The percentage of time spent with institutional work is added to the total duration of the PhD studies.

In summary, the PhD students at AASS will be doing four sorts of things during their PhD: work on their research project; take graduate courses; contribute to undergraduate education; and participate in the scientific life of AASS and of the international community.

More information about the PhD studies at AASS can be found under <http://www.aass.oru.se/Research/Learning/openphdposfaq.html>.
