

# Improved Data Association and Occlusion Handling for Vision-Based People Tracking by Mobile Robots

Grzegorz Cielniak, Tom Duckett

Dept. of Computing & Informatics, University of Lincoln, United Kingdom

Achim J. Lilienthal

AASS, Örebro University, Sweden

- Approach for tracking multiple persons using a combination of colour and thermal vision by mobile robots
- Thermal information » easier detection
- Colour information » improved data association
- Machine learning classifier using thermal and colour features to detect occlusions
- Explicit occlusion handling for improved tracking performance
